

Wilson Vuu . Jarvis Consulting

I am a Computer Science graduate from Wilfrid Laurier University with experience building full-stack applications and end-to-end data pipelines. During my time at Cardata, I engineered Laravel and Node.js backend services and implemented a modular React and TypeScript architecture to enhance system maintainability. Previously, at Lowe-Martin, I automated data sanitization using Python and VBA, streamlining shipping accuracy and reducing manual overhead through batch processing. I am particularly driven by the data engineering side of development, enjoying the process of mapping data flows to identify bottlenecks and building reliable pipelines that transform raw data into a dependable foundation for decision-making.

Skills

Proficient: Java, Python, RDBMS/SQL, React.js, PHP (Laravel)

Competent: Docker, HTML/CSS, VBA, Node.js, Linux/Bash

Familiar: Django, C, Symfony/Composer, Machine Learning, PySpark

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_WilsonVuu

Cluster Monitor [GitHub]: A cron-based monitoring agent that captures hardware specs and resource usage across a Linux cluster, storing data in a centralized PostgreSQL database managed via Docker for analysis and reporting.

Highlighted Projects

Inventory Management System: Engineered a full-stack inventory platform using Spring Boot, Java, React, and MySQL with efficient CRUD operations and a robust RESTful API architecture. Designed a normalized MySQL schema optimized for transactional consistency and performance.

Smart Investors: Developed a full-stack stock market simulator to enable users to practice investment strategies in a semi real-time environment. Designed a relational database schema to track complex financial simulations and integrated the Yahoo Finance API to provide live market data for accurate portfolio tracking.

Professional Experiences

Software Developer/Data Engineer, Jarvis (2026-present): Contributed to backend service and data pipeline development within a fast-paced Agile environment.

Full Stack Software Engineer, Cardata (Nov 2021-Jul 2022): Integrated React and TypeScript frontends with Laravel and Node.js backend services to improve system scalability and the user experience of daily payment processing. Engineered a dynamic PDF export system to automate report generation and introduced a localization pipeline achieving 93% translation coverage.

Data/Programmer Analyst Intern, Lowe-Martin (May 2019-Sep 2019): Automated data sanitization processes using VBA and Python to sanitize CSV data, resulting in an increase in shipping accuracy. Built customized report generation tools in Microsoft Access and Excel for data validation efficiency. Developed a functional prototype of the corporate website using HTML/CSS and JavaScript.

Education

Wilfrid Laurier University (2017-2022), Bachelor of Science, Computer Science

Miscellaneous

- Badminton player: Still a beginner, but I play in weekly recreational sessions. It's a fun way to stay active, and I really enjoy the quick pace and the social side of the game.
- Hiking enthusiast: I love hitting local trails and getting lost in conservation areas for a few hours. For me, it's just a good way to clear my mind.
