

Wilson Vuu . Jarvis Consulting

I am a Computer Science graduate from Wilfrid Laurier University with a strong foundation in full-stack development and a track record of delivering software solutions. My experience at Lowe-Martin and Cardata cultivated a deep interest in the data layer, from building pipelines and automating workflows to optimizing database performance, leading me to focus on designing and supporting scalable, end-to-end data pipelines using modern data stack technologies, with a genuine passion for transforming raw, complex data into reliable, meaningful insights that drive real business decisions.

Skills

Proficient: Java, Python, RDBMS/SQL, React, PHP

Competent: Docker, HTML/CSS, Git, Node.js, Laravel

Familiar: Django, MongoDB, Symfony/Composer, MySQL, C

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_WilsonVuu

Cluster Monitor [GitHub]: A cron-based monitoring agent that captures hardware specs and resource usage across a Linux cluster, storing data in a centralized PostgreSQL database managed via Docker for analysis and reporting.

Highlighted Projects

Inventory Management System: Engineered a full-stack inventory platform using Spring Boot, Java, React, and MySQL with efficient CRUD operations and a robust RESTful API architecture. Designed a normalized MySQL schema optimized for transactional consistency and performance, and automated dependency management with Maven to improve build consistency and reduce setup time.

Smart Investors: Designed and built a scalable web application using React, MySQL, and PHP to support complex financial simulations. Developed a stock market database schema in MySQL and integrated real-time stock data via Yahoo Finance API to deliver a seamless user experience.

Professional Experiences

Software Developer/Data Engineer, Jarvis (2026-present): Contributed to backend service and data pipeline development within a fast-paced Agile environment.

Full Stack Software Engineer, Cardata (Nov 2021-Jul 2022): Refactored legacy Vue.js into a modern React and TypeScript architecture, improving system maintainability and scalability. Built Laravel and Node.js backend services to streamline daily payment processing, reducing calculation latency by 15%. Engineered a dynamic PDF export system to automate report generation and introduced a localization pipeline achieving 93% translation coverage.

Data/Programmer Analyst Intern, Lowe-Martin (May 2019-Sep 2019): Automated data sanitization processes using VBA and Python to sanitize CSV data, resulting in a 12.2% increase in shipping accuracy. Built customized report generation tools in Microsoft Access and Excel, enhancing data validation efficiency by 30%. Developed a functional prototype of the corporate website using HTML/CSS and JavaScript.

Education

Wilfrid Laurier University (2017-2022), Bachelor of Science, Computer Science

Miscellaneous

- Badminton player
- Hiking enthusiast
- Volunteer, Buddhist Temple
